

PROFESSIONAL SUMMARY

Business & Sales Operational Analyst with 3+ years of experience analysing customer, operational, and commercial data across retail and technology environment. Experienced in SQL, Power BI, Advanced Excel, KPI reporting, forecasting, scenario modelling, data validation, and UAT across complex datasets and multiple stakeholder groups. At Eurasia Supermarket, managed reporting across 4 Dublin locations tracking €4 million in revenue and identified €450K in regional market opportunities through commercial analysis. Holds an MSc in Data Analytics from the National College of Ireland and is authorised to work in Ireland.

CORE SKILLS

Data Analytics: Data Analysis, Complex Data Sets, Trend Analysis, Data Validation, Data Quality

Programming & Databases: SQL, Python, PostgreSQL, MySQL

Business Intelligence: Power BI, Advanced Excel, Dashboard Development, KPI Reporting, Performance Reporting

Business Operations: Forecasting, Scenario Modelling, Requirements Gathering, UAT, Business Insights

Tools: Salesforce, Snowflake, SQL Server, Microsoft Excel

WORK EXPERIENCE

Sales Operational Analyst, Eurasia / Ireland - Hybrid

Oct 2025 – Present

- Manage regional performance reporting across 4 Dublin locations, tracking approximately €4 million revenue through Power BI and Excel for 8-10 executive stakeholders.
- Analyse 180K + commercial transaction records across 4 Dublin locations, identifying €450K in regional market opportunities through pricing, category and sales-performance analysis.
- Build forecasting and scenario models for pricing, promotions, and demand, increasing margin visibility by 18%.
- Streamline Salesforce and enterprise reporting data architecture supporting 8 recurring reports across 5 business function, reducing reporting turnaround time by 30%.
- Translate commercial KPI analysis and performance trends into growth strategies with 5+ cross-functional stakeholders across 4 regional business functions.

Data Analyst, Txend / Dover, USA

Jan 2023 – Aug 2024

- Evaluated 500K+ customer and engagement records across 20+ studios using SQL cohort analysis, segmentation and trend comparisons, uncovering changes in registrations, active user behaviour and studio adoption that guided Product and Operations reviews.
- Designed Power BI dashboards tracking 8+ customer and engagement KPIs, standardising performance reporting for 10-15 users across Product and Operations and improving visibility of declining engagement studios.
- Investigated 2M+ delivery, supplier and HubSpot CRM complaint records using PostgreSQL and Python, linking delay patterns, supplier performance and customer complaints to identify recurring service failures.
- Developed supplier performance reporting across 8+ operational KPIs and an 81% accuracy predictive model, enabling earlier identification of higher risk delivery failures and more proactive supplier intervention.
- Automated and optimised Snowflake and SQL Server reporting workflows processing 1.5M+ records monthly, cutting ETL runtime by 60% and reducing manual preparation before dashboards and management reporting.

Junior Data Analyst, Txend / Lahore, Pakistan

Dec 2021 – Dec 2022

- Supported recurring operational reporting by extracting, cleaning and validating customer, product and transaction data using SQL and Excel.
- Assisted with dashboard preparation and KPI tracking for Product and Operations teams, improving consistency of weekly and monthly performance reporting.
- Performed data reconciliation and quality checks across source systems, identifying incomplete, duplicate and inconsistent records before reporting.
- Worked with senior analysts and business stakeholders to document reporting requirements, investigate data issues and support UAT for reporting changes.

PROJECTS

Ireland Live Register Unemployment Analysis | CSO Open Data

- Analysed 12,600+ CSO Live Register records (PxStat LRM15, Jan 2022-Jun 2026) covering 26 counties, 2 age groups and both sexes. I cleaned and reshaped the raw export in Power Query and reconciled every age and sex breakdown against the

- national totals to rule out double-counting.
- Used pivot analysis, SUMIFS and monthly-average normalisation to compare trends by county, age and sex. The average monthly register fell 7.2% (175.5k to 162.8k) between 2022 and 2025, then rose 3% year on year in H1 2026, the first sign of the trend reversing.
 - Built an interactive Excel dashboard with 7 pivot tables, 3 synchronised slicers (year/month, age, sex) and dynamic KPI cards. GETPIVOTDATA, SUMIFS, RANK and INDEX/MATCH formulas recalculate year-on-year change and name the most-improved and highest-risk county for whichever year is selected.
 - Found diverging trends under the national figure. Under-25 claimants rose 5.5% while the 25+ group fell 8.6%, taking the youth share from 10.0% to 12.0%. Regional counties recovered fastest (Cavan -20%, Clare -17%), while Dublin stayed flat and still accounts for 28% of the register. The male share also grew, from 53.5% to 56.4%.
 - Found a July peak in the register every year, followed by a Sep-Nov low, which points to the end of the academic year feeding claimant numbers.
 - Turned the findings into points for employment service planning focus youth activation schemes on under 25s, direct Intreo resources to Dublin, Kildare and Limerick where numbers grew in 2025, and plan caseload capacity around the July peak.
 - **Tools Used:** Excel, Power Query, Power BI, DAX, Pivot Tables, Slicers, Excel formulas (GETPIVOTDATA, SUMIFS, RANK, INDEX/MATCH, IFERROR), CSO PxStat

Customer & Digital Business Platform Performance Analysis | Txend / MyStudio Pro

- Analysed 500K+ customer and engagement records across 20+ studios using SQL cohort analysis, segmentation and trend comparisons to track registration growth, active-user behaviour and studio-level adoption.
- Used the analysis to highlight studios with declining engagement and changes in customer activity, giving Product and Operations teams clearer areas to investigate during performance reviews.
- Combined customer, studio and product data from multiple sources, resolving duplicate and inconsistent records before they reached KPI reports and dashboards.
- Built Power BI dashboards covering 8+ customer and engagement KPIs, including registrations, active users, studio activity and usage trends, for recurring performance reviews.
- Standardised KPI definitions and reporting logic so customer and product metrics were measured consistently across dashboards and stakeholder reports.
- **Tools Used:** Python, SQL, Power BI, Excel

Operational Delivery & Supplier Performance Analysis | Txend / Delivery Operations

- Analysed 2M+ delivery, supplier and customer-complaint records across PostgreSQL and HubSpot CRM to identify delay patterns, supplier issues and recurring service failures.
- Used PostgreSQL and Python to compare supplier performance, complaint frequency, delivery delays and cost behaviour, helping isolate the main drivers behind operational problems.
- Built Power BI dashboards tracking 8+ operational KPIs, including on time delivery, delay rate, supplier performance, complaint trends and cost efficiency for recurring management reviews.
- Developed a predictive model with 81% accuracy to flag higher-risk suppliers and potential delivery failures, supporting earlier intervention and more proactive operational planning.
- Combined delivery and complaint analysis to highlight where service issues were most likely to affect customers, giving Operations teams clearer priorities for supplier follow-up and corrective action.
- **Tools Used:** PostgreSQL, Power BI, Python

EDUCATION

National College of Ireland, Dublin, MSc Data Analytics Grade 1:1	2024 – 2025
• Coursework: Business Intelligence, Statistical Analysis, Machine Learning, Analytics Programming, Data Governance & Ethics	
University of Lahore, Pakistan, BSc Computer Software Engineering	2018 – 2022

CERTIFICATIONS

Power BI Data Analyst Associate (PL-300), Microsoft Certified
MySQL for Data Analytics, Analyst Builder |
